

Cardinal Numbers

Lesson Objectives

Students will be able to:

- Identify number patterns
- Recognize final **Y** sounds in numbers
- Spell larger numbers correctly
- Use numbers in everyday situations

Grammar Focus

Cardinal numbers help us talk about:

- *quantity*
- *age*
- *prices*
- *time*
- *counting*

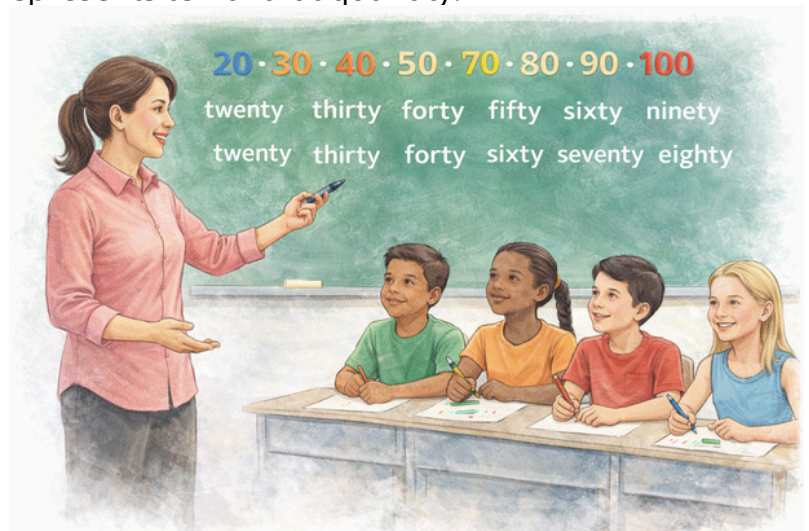

Part One – Numbers 20 to 100

Notice the Pattern

In English, many numbers that represent groups of ten follow a simple pattern. Most of them end with the letters **-ty**. The ending **-ty** means a group of ten. When we add **-ty** to a number root, the word becomes a number that represents ten of that quantity.

For example:

- **20:** twenty = two groups of ten
- **30:** thirty = three groups of ten
- **40:** forty = four groups of ten
- **50:** fifty = five groups of ten
- **60:** sixty = six groups of ten
- **70:** seventy = seven groups of ten
- **80:** eighty = eight groups of ten
- **90:** ninety = nine groups of ten

Dialogue 5 — What is...?

Teacher: Daniel, what is $8 + 2$?

Daniel: Eight **plus** two is ten.

Teacher: Very good, Daniel!

Teacher: Emily, what is $9 - 4$?

Emily: Nine **minus** four is five.

Teacher: Excellent!

Teacher: Lucas, what is 1×1 ?

Lucas: One **times** one is one.

Teacher: Correct!

Teacher: Anna, what is $12 \div 3$?

Explanation

In Portuguese, we usually ask math questions like this: “**Quanto é** $2 + 2$?” But in English we do not say “**How much is.**” Instead, we ask: “**What is** $2 + 2$?”. So in English, math questions normally follow this structure:

What is 3×3 ? **What is** $3 + 3$?

What is $3 - 3$? **What is** $3 \div 3$?

Anna: Twelve **divided by** three is four.

Teacher: Great job, everyone!

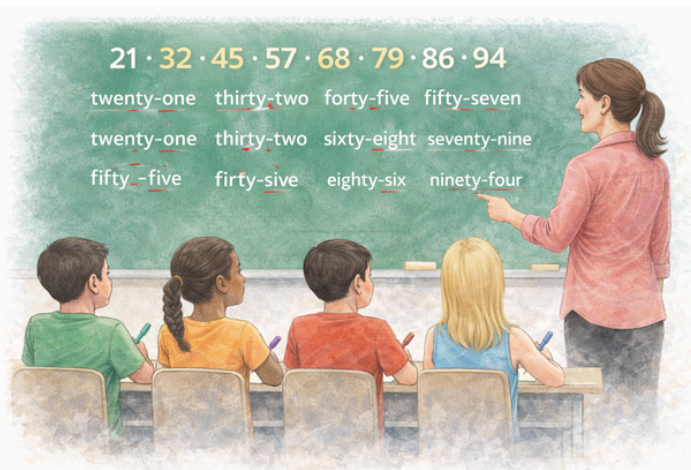

Part Two – Numbers 21-99

Build Bigger Numbers

After learning the numbers twenty, thirty, forty, fifty, sixty, seventy, eighty, and ninety, we can create many other numbers by adding a second number after the tens. In English, numbers between the tens are formed using a hyphen (-). **Structure:** tens number + ones number.

21 → twenty-one
24 → twenty-four
35 → thirty-five
48 → forty-eight
52 → fifty-two
67 → sixty-seven
79 → seventy-nine
86 → eighty-six
94 → ninety-four

22 → twenty-two
25 → twenty-five
33 → thirty-three
46 → forty-six
58 → fifty-eight
64 → sixty-four
71 → seventy-one
85 → eighty-five
96 → ninety-six

This pattern helps us read and say numbers correctly in English.

Dialogue 6 — How old are you?

Teacher: Daniel, how old are you?

Daniel: I am twenty-one years old.

Teacher: Very good!

Teacher: Emily, how old is your sister?

Emily: She is thirty-two.

Teacher: Excellent!

Teacher: Lucas, how old is your father?

Lucas: He is forty-five.

Teacher: Great!

Teacher: Anna, how old is your grandmother?

Anna: She is seventy-nine.

Teacher: Very good, everyone!

Dialogue 7 — What is your phone number?

Teacher: Daniel, what's your phone number?

Dan: It's twenty-one thirty-four seventy-six.

Teacher: Good!

Teacher: Emily, what's your house number?

Emily: My house number is forty-five.

Teacher: Very nice.

Teacher: Lucas, what is your favorite number?

Lucas: My favorite number is sixty-eight.

Teacher: Great!

Teacher: Anna, what is your lucky number?

Anna: My lucky number is ninety-two.

Teacher: Excellent!

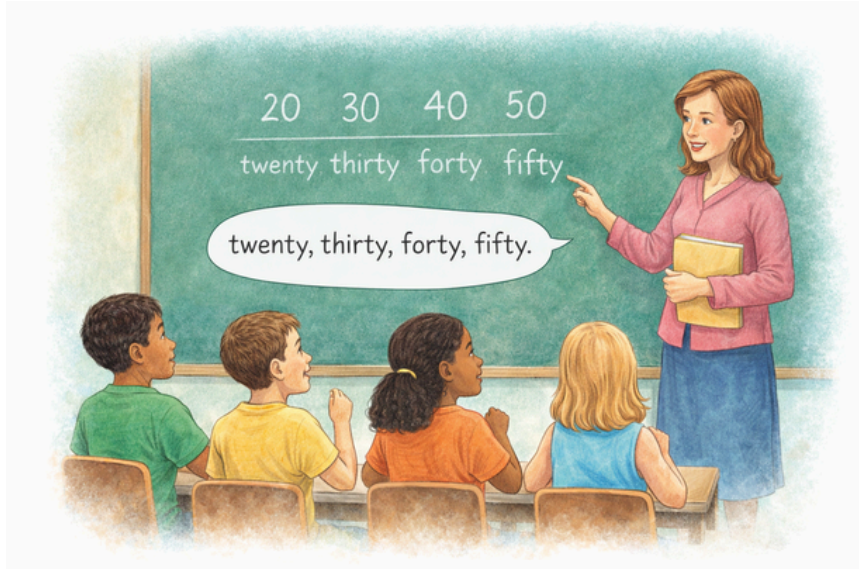

In English, numbers between the tens are written with a hyphen (-). This small line connects the **tens** number and the **ones** number.

- twenty-one
- thirty-two
- sixty-nine
- twenty-five
- thirty-four
- forty-five
- eighty-four
- thirty-two
- forty-seven
- fifty-eight
- ninety-nine
- seventy-one

Part Three – Reading**Numbers in Our Class**

Today the teacher asks the students about numbers in their lives. Daniel is twenty-one years old. His house number is thirty-four. Emily is thirty-two years old. Her favorite number is twenty-five. Lucas says his father is forty-five years old. Anna says her grandmother is seventy-nine years old. The teacher writes many numbers on the board: *twenty, thirty, forty, fifty*.

She explains that many numbers end with the sound /i/ because they end with the letter **Y**. Some examples are: *sixty, seventy, eighty, ninety, fifty*. Then she shows other numbers that end with the sound /n/: *seven, eleven, nineteen*. The students repeat the numbers together. "Twenty-one, thirty-two, forty-five, seventy-nine." The class practices saying the numbers clearly.

**Reading Check**

How old is Daniel?

What is Emily's favorite number?

How old is Lucas's father?

How old is Anna's grandmother?

What sound do many numbers ending in **Y** have?

Dialogue 8 – Talking About the Text

Teacher: How old is Daniel?

Lucas: He is twenty-one.

Teacher: What is Emily's favorite number?

Anna: It is twenty-five.

Teacher: How old is Lucas's father?

Daniel: He is forty-five.

Teacher: How old is Anna's grandmother?

Emily: She is seventy-nine.

Teacher: What sound do many numbers ending in **Y** have?

Students: The /i/ sound.

Teacher: Great!
